Chemistry words · Glossary

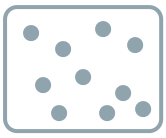

Grade 7 · IB MYP 2 · Unit 1 Chemistry's Secrets Unlocked · 46 words in simple English

Name: _____ Class: _____ My first language: _____

👀 Read the word and look at the picture. ✍️ Write the word in your language. 🗣️ Say the example sentence out loud. 🙈 Cover the meaning and test yourself.

1 · Particles | 2 · Changes and separating | 3 · Acids and alkalis | 4 · Neutralisation and salts

1 · Particles

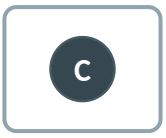

1 particle *noun · particles*

A very, very small piece of a substance.

e.g. Everything is made of particles.

In my language: _____

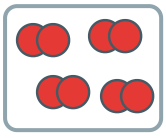

2 atom *noun · atoms*

The smallest particle of an element.

e.g. A carbon atom is far too small to see.

In my language: _____

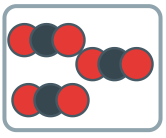

3 element *noun · elements*

A substance made of only one type of atom.

e.g. Gold, iron and oxygen are elements.

In my language: _____

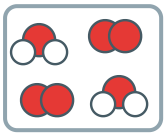

4 compound *noun · compounds*

Two or more different types of atom, chemically joined together.

e.g. Water (H_2O) is a compound.

In my language: _____

5 mixture *noun · mixtures*

Two or more substances together, but not chemically joined.

e.g. Air is a mixture of gases.

In my language: _____

6 molecule *noun · molecules*

A group of atoms joined together.

e.g. One water molecule has three atoms.

In my language: _____

Na

7 symbol *noun · symbols*

One or two letters that stand for an element.

e.g. The symbol for sodium is Na.

In my language: _____

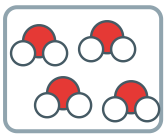

H_2O

8 formula *noun · formulas*

Letters and small numbers that show the atoms in a substance.

e.g. The formula of water is H_2O.

In my language: _____

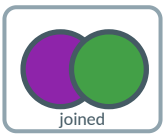

9 pure substance *noun*

Only one element or one compound, with nothing else mixed in.

e.g. Distilled water is a pure substance.

In my language: _____

10 bond (joined) *noun · bonds*

The link that holds atoms together.

e.g. In a compound the atoms are joined by bonds.

In my language: _____

2 · Changes and separating

11 physical change *noun*

A change where no new substance is made. It is often easy to undo.

e.g. Cutting paper is a physical change.

In my language: _____

12 chemical change *noun*

A change where a new substance is made. It is hard to undo.

e.g. Burning wood is a chemical change.

In my language: _____

13 reversible *adjective*

Can be changed back.

e.g. Melting chocolate is reversible.

In my language: _____

14 irreversible *adjective*

Cannot be changed back.

e.g. Frying an egg is irreversible.

In my language: _____

15 melt *verb · melts, melted*

To change from a solid to a liquid when it gets warm.

e.g. Ice melts in the sun.

In my language: _____

16 freeze *verb · freezes, froze, frozen*

To change from a liquid to a solid when it gets cold.

e.g. Water freezes at 0 °C.

In my language: _____

17 evaporate *verb · evaporates, evaporated*

To change from a liquid to a gas.

e.g. Water evaporates from a puddle.

In my language: _____

18 condense *verb · condenses, condensed*

To change from a gas to a liquid when it gets cold.

e.g. Steam condenses on a cold window.

In my language: _____

19 dissolve *verb · dissolves, dissolved*

To mix into a liquid so that you cannot see it any more.

e.g. Salt dissolves in water.

In my language: _____

20 soluble *adjective*

Can dissolve in a liquid.

e.g. Sugar is soluble in water.

In my language: _____

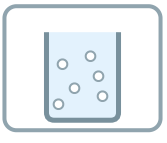

21 insoluble *adjective*

Cannot dissolve in a liquid.

e.g. Sand is insoluble in water.

In my language: _____

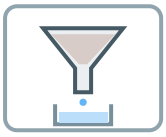

22 solution *noun · solutions*

A liquid with something dissolved in it.

e.g. Salt water is a solution.

In my language: _____

23 filter *verb · filters, filtered · noun: filtration*

To separate a solid from a liquid with filter paper.

e.g. We filter the sand out of the water.

In my language: _____

24 magnet *noun · magnets*

An object that pulls things made of iron.

e.g. A magnet pulls iron out of the mixture.

In my language: _____

25 react *verb · reacts, reacted · noun: reaction*

When substances change and make new substances.

e.g. Iron reacts with sulfur when it is heated.

In my language: _____

26 new substance *noun*

A substance that was not there before the change.

e.g. Iron sulfide is a new substance.

In my language: _____

🍋 3 · Acids and alkalis

27 acid *noun · acids · adjective: acidic*

A substance with a pH below 7. Food acids taste sour.

e.g. Lemon juice is an acid.

In my language: _____

28 alkali *noun · alkalis · adjective: alkaline*

A base that dissolves in water. Its pH is above 7.

e.g. Soap is an alkali.

In my language: _____

29 base *noun · bases*

A substance that can neutralise an acid.

e.g. Baking soda is a base.

In my language: _____

30 neutral *adjective*

Not an acid and not an alkali. Its pH is 7.

e.g. Pure water is neutral.

In my language: _____

31 pH scale *noun*

Numbers from 1 to 14 that show how acidic or alkaline something is.

e.g. Lemon juice has a pH of 2.

In my language: _____

32 indicator *noun · indicators*

A substance that changes colour in acids and alkalis.

e.g. Red cabbage juice is an indicator.

In my language: _____

33 universal indicator *noun*

An indicator with many colours. It shows the pH number.

e.g. Universal indicator turns green in pure water.

In my language: _____

34 litmus *noun*

An indicator: it turns red in acids and blue in alkalis.

e.g. Litmus paper turns red in vinegar.

In my language: _____

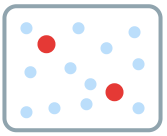

35 concentrated *adjective*

Lots of acid (or alkali) in a little water.

e.g. Concentrated acid is very dangerous.

In my language: _____

36 dilute *adjective · verb: dilutes, diluted*

A little acid (or alkali) in lots of water. The pH is closer to 7.

e.g. Add water to dilute the acid.

In my language: _____

37 corrosive *adjective*

Can burn and damage skin, eyes and other materials.

e.g. Oven cleaner is corrosive.

In my language: _____

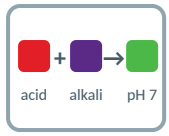

38 acid rain *noun*

Rain made acidic by gases from burning coal and fuel.

e.g. Acid rain harms trees and lakes.

In my language: _____

4 · Neutralisation and salts

39 neutralisation *noun · verb: neutralise, neutralises*

An acid and an alkali react and cancel each other out. The pH moves to 7.

e.g. Toothpaste neutralises the acid in your mouth.

In my language: _____

40 salt *noun · salts*

A new substance made when an acid neutralises an alkali.

e.g. Sodium chloride is a salt.

In my language: _____

A + B → C

41 word equation *noun · word equations*

Words that show a reaction: the reactants, an arrow, then the products.

e.g. acid + alkali → salt + water

In my language: _____

A + B → C

42 reactant *noun · reactants*

A substance at the start of a reaction (left of the arrow).

e.g. Acid and alkali are the reactants.

In my language: _____

A + B → C

43 product *noun · products*

A new substance made in a reaction (right of the arrow).

e.g. Salt and water are the products.

In my language: _____

44 hydroxide *noun*

The last word in the name of many alkalis.

e.g. Sodium hydroxide is an alkali.

In my language: _____

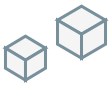

...chloride
...sulfate
...nitrate

45 chloride · sulfate · nitrate *nouns: salt name endings*

The second name of a salt. It comes from the acid.

e.g. Hydrochloric acid makes chlorides; sulfuric makes sulfates; nitric makes nitrates.

In my language: _____

46 crystals *noun · crystal*

Small solid pieces with flat sides and straight edges.

e.g. Salt crystals form when the water evaporates.

In my language: _____

A–Z · find a word

acid	27 · p. 3	evaporate	17 · p. 2	particle	1 · p. 1
acid rain	38 · p. 3	filter	23 · p. 2	pH scale	31 · p. 3
alkali	28 · p. 3	formula	8 · p. 1	physical change	11 · p. 2
atom	2 · p. 1	freeze	16 · p. 2	product	43 · p. 4
base	29 · p. 3	hydroxide	44 · p. 4	pure substance	9 · p. 1
bond (joined)	10 · p. 1	indicator	32 · p. 3	react	25 · p. 3
chemical change	12 · p. 2	insoluble	21 · p. 2	reactant	42 · p. 4
chloride · sulfate · nitrate	45 · p. 4	irreversible	14 · p. 2	reversible	13 · p. 2
compound	4 · p. 1	litmus	34 · p. 3	salt	40 · p. 4
concentrated	35 · p. 3	magnet	24 · p. 2	soluble	20 · p. 2
condense	18 · p. 2	melt	15 · p. 2	solution	22 · p. 2
corrosive	37 · p. 3	mixture	5 · p. 1	symbol	7 · p. 1
crystals	46 · p. 4	molecule	6 · p. 1	universal indicator	33 · p. 3
dilute	36 · p. 3	neutral	30 · p. 3	word equation	41 · p. 4
dissolve	19 · p. 2	neutralisation	39 · p. 4		
element	3 · p. 1	new substance	26 · p. 3		

Opposites

- **acid** ↔ **alkali**
- **soluble** ↔ **insoluble**
- **concentrated** ↔ **dilute**
- **physical change** ↔ **chemical change**
- **reversible** ↔ **irreversible**
- **melt** ↔ **freeze**
- **evaporate** ↔ **condense**
- **reactant** ↔ **product**

💡 Make your own word cards: write the English word on the front, and the picture and the word in your language on the back. Practise with a partner.
